

Automatic density measuring instrument designed for rapid and accurate measurements of density. An American-made product available worldwide with good performance at a reasonable cost.

Features

- n Analytical balance (available for other measurements).
- n Simplified operation.

Specifications

- n Tabletop unit.
- n Balance measures to nearest 0.0001 g.

Performance

- n Measures the density of up to four samples per minute.
- n Accuracy is within $\pm 0.025\%$.
- n Balance resolution is good to 0.0001 g.

Test Capabilities

- n Measure the density of cured rubber compounds.
